Abstrak

ABSTRAK

Posbindu PTM diharapkan dapat menanggulangi masalah tingginya angka kesakitan dan angka kematian akibat PTM. Penelitian ini bertujuan menganalisis determinan pemanfaatan Posbindu PTM di KKP Kelas I Tanjung Priok. Jumlah sampel pada penelitian ini sebanyak 114 sampel dan menggunakan data sekunder kegiatan Posbindu PTM dan hasil pemeriksaan kesehatan pegawai. Teknik analisis yang digunakan adalah uji chi square dan regresi logistik untuk memperoleh gambaran hubungan antara karakteristik individu dan status kesehatan terhadap pemanfaatan Posbindu PTM. Berdasarkan hasil uji bivariat dan uji multivariat regresi logistik baik usia, jenis kelamin, pendidikan, pekerjaan dan status kesehatan tidak mempengaruhi pemanfaatan Posbindu PTM (p value > 0,05).

ABSTRACT

The role of Posbindu PTM for NCDs is to overcome the mortality rate and morbidity rate. The aim of this study is to analyze the role of Posbindu PTM for NCDs on Health Quarantine Office on Port of Tanjung Priok. The amount of sample that used in this research was 114 sample and the data was taken from the activities of Posbindu PTM and the result of health examination that have been done. Analyses technique used in this analyses was chi square and logistic regression to get the pictures of the correlation between the characteristic and health status. The result shows that there was no correlation between the utilization of Posbindu for NCDs with age, gender, education, job title and health status (p value > 0,05).
