Abstrak

Penelitian ini bertujuan untuk mengetahui perbandingan religiusitas dan spiritualitas antara dewasa muda dengan orangtua berbeda agama dan dewasa muda dengan orangtua seagama. Data diperoleh dari 536 partisipan yang berada pada tahap dewasa muda 18-25 tahun dan dianalisis menggunakan teknik perbandingan independent sample t-test. Religiusitas diukur menggunakan Religious Commitment Inventory-10 $p=0,905$ dari Worthington dkk. 2003 . Spiritualitas diukur menggunakan Spiritual Attitude Involvement Inventory $?=0,867$ dari Meezenbroek 2012. Hasil analisis komparatif menunjukkan bahwa terdapat perbedaan religiusitas yang signifikan $p=0,000$, $p0,05$.

.....

This study aims to determine the difference of religiosity and spirituality between emerging adult with religious heterogamous parents and emerging adults with religious homogamous parents. The data was collected from 536 participants in emerging adulthood stage and was analyzed using independent sample t test. Religious Commitment Inventory 10 by Worthington dkk. 2003 was used to measure religiosity with 0,905. Spiritual Attitude Involvement Inventory by Meezenbroek dkk. 2012 was used to measure spirituality with 0,867. The results showed that there is a significant difference between these groups $p=0,000$, $p0,05$. Theoretical and practical implications were discussed.
