Abstrak

Penelitian ini dilakukan untuk melihat hubungan antara keterlibatan belajar dan adaptabilitas karier pada siswa kelas 9. Partisipan dalam penelitian ini berjumlah 611 siswa yang berasal dari dua SMPN di Depok yang termasuk pada tahap perkembangan remaja. Untuk mengukur adaptabilitas karier digunakan alat ukur Career Adapt-Abilities Scale CAAS yang dikembangkan oleh Savickas dan Porfeli 2012. Keterlibatan belajar diukur menggunakan alat ukur School Engagement Measurement SEM -MacArthur yang dikembangkan oleh Fredricks, Blumenfeld, Friedel, dan Paris 2005. Untuk melihat hubungan antara keterlibatan belajar dan adaptabilitas karier, peneliti menggunakan teknik statistik Pearson Correlation. Hasil penelitian menunjukkan terdapat hubungan yang positif dan signifikan antara keterlibatan belajar dengan adaptabilitas karier. Dimensi keterlibatan belajar yang memiliki hubungan paling kuat dengan adaptabilitas karier adalah keterlibatan kognitif.

.....This research was conducted to find the relationship between learning engagement and career adaptability on 9th grade students. Participants in this study were 611 students from two junior high schools in Depok, West Java, Indonesia, who are classified as adolescents in development stage theories Papalia Feldmand, 2012. To measure career adaptability, the Career Adapt Abilities Scale CAAS developed by Savickas dan Porfeli 2012 was used. The School Engagement Measurement SEM MacArthur developed by Fredricks, Blumenfeld, Friedel, and Paris 2005 was implemented to measure learning engagement. To identify the relationship between learning engagement and career adaptability The Pearson Correlation statistical method was used. The results showed that there was a significant positive relationship between learning engagement and career adaptability. Cognitive engagement was the dimension of learning engagement with the strongest relation to career adaptability.
