Menghadapi dampak negatif kelahiran prematur. Perkembangan teknologi dan internet membuat online support group marak dan populer, termasuk pada ibu dengan bayi prematur. Penelitian ini bertujuan untuk mengidentifikasi karakteristik ibu, karakteristik bayi prematur, jenis dukungan, harapan atas jenis dukungan, dan intensitas seluruh dukungan dalam online support group. Penelitian kuantitatif menggunakan kuesioner online melibatkan 82 responden. Karakteristik ibu: rata-rata usia 30,91 tahun, sebagian besar tamatan pendidikan tinggi, sebagian besar mengurus rumah tangga, sebagian besar tidak memiliki riwayat penyakit, dan sebagian besar tidak memiliki riwayat prematuritas sebelumnya. Karakteristik bayi prematur: rata-rata berusia 23,48 bulan, sebagian besar laki-laki, sebagian besar moderate preterm, sebagian besar lahir melalui operasi caesar, rata-rata berat lahir 1595,44 gram, dan sebagian besar memiliki riwayat penyakit kuning/jaundice. Jenis dukungan meliputi emotional, informational, instrumental, dan companionship support. Setiap jenis dukungan terbagi menjadi 5 kategori jawaban selalu, sering, kadang, jarang, dan tidak pernah . Jenis dukungan yang paling banyak mendapatkan jawaban ldquo;selalu rdquo; adalah informational support dan paling banyak mendapatkan jawaban ldquo;tidak pernah rdquo; adalah instrumental support. Informational support dipilih sebagai jenis dukungan prioritas utama yang diinginkan oleh responden 46,3 . Intensitas dukungan pada seluruh dukungan yang didapatkan responden berkategori baik 53,7 . Penelitian ini merekomendasikan optimalisasi jenis dukungan dalam online support group untuk meminimalisasi dampak negatif kelahiran prematur pada ibu.
