

Sistem kuota tangkap ikan: kemungkinan penerapan pengelolaan perikanan berbasis hak rights-based fishing di Indonesia = Quota system possibility of implementing rights based fishing in Indonesia

Muhammad Dimas Tribowo, author

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20459116&lokasi=lokal>

Abstrak

Pengelolaan perikanan terbuka open access yang ada di Indonesia, ditengarai menjadi sumber berbagai permasalahan seperti penangkapan ikan yang merusak destructive fishing hingga penangkapan berlebih over fishing . Penulis akan membandingkan bagaimana pengelolaan perikanan terbuka di Indonesia dengan pengelolaan berbasis hak terutama yang menggunakan batasan terhadap tangkapan output control melalui system kuota. Bentuk pengelolaan perikanan berbasis hak lain seperti hak pakai wilayah territorial use right fisheries/ TURFs juga akan dijabarkan sekilas. Dengan menggunakan metode pendekatan perbandingan penulis akan menganalisa kemungkinan penerapan sistem kuota pada pengelolaan sumber daya perikanan di Indonesia beserta hambatan apa saja yang mungkin dihadapi.

<hr>Open access fisheries could be the cause of several problems in Indonesia's fisheries management such as destructive fishing to over fishing. This research would compare fisheries management in Indonesia with other practices especially rights based fishing mechanism using output control by setting a quota. Other rights based fishing regime, namely Territorial Use Right Fisheries (TURFs) would be explained briefly. By using comparative approach method writer would analyze the possibilities of implementing a quota based system in Indonesia, including the aspects that could inhibit the process.
