ABSTRAK
 Kekerasan seksual di Indonesia terus meningkat dan Cirebon termasuk wilayah darurat kekerasan pada anak. Tujuan penelitian adalah mengidentifikasi pengaruh edukasi pencegahan kekerasan seksual terhadap persepsi anak usia prasekolah. Desain penelitian ini kuantitatif dengan pendekatan metode quasi experimental dengan pre-post test with control design melibatkan 240 responden meliputi 120 responden pada kelompok intervensi yang mendapat intervensi edukasi pencegahan kekerasan seksual dan 120 responden pada kelompok kontrol. Hasil analisis chi Square menunjukkan adanya pengaruh edukasi seksual terhadap persepsi anak usia prasekolah $p \text{ value} < 0,05$. Edukasi pencegahan kekerasan seksual pada anak usia prasekolah dapat direkomendasikan untuk masuk dalam kurikulum pendidikan usia dini dan keperawatan.ABSTRACT
 Sexual violence in Indonesia continues to increase and Cirebon has been included in the emergency area of child. The objective of the study was to identify the influence of sexual violence prevention education toward preschool age perception. The design of this study was quantitative approach with quasi experimental method with pre post test with control design involving 240 respondents including 120 respondents in the intervention group who received sexual violence prevention education intervention and 120 respondents in the control group. The result of Chi Square analysis shows the effect of education on preventing sexual violence toward preschoolers perception $p \text{ value } 0,05$. Education of sexual violence prevention can be recommended for entry into the curriculum of early childhood education and nursing education.
