Senior year undergraduate students should have confidence in career decisions because they soon to be graduated and starting the transition stage from student to professional life. The purpose of this research is to know the role of vocational identity to career decision self efficacy CDSE of senior year undergraduate students. The participants of this study consisted of 302 Universitas Indonesia senior year undergraduate students from all Faculty. Vocational identity is measured using a vocational identity scale VIS which is a sub scale of My Vocational Situation MVS Holland, Daiger, Power, 1980 and consisting of 18 items. Furthermore, the CDSE were measured using a 25 items Self Efficacy Scale Short Form Betz, Klein, Taylor, 1996 that adapted to Indonesia. The result indicates that there is a significant role of vocational identity toward CDSE of senior year undergraduate students .489, p
