Abstrak

ABSTRAK

Mahasiswa keperawatan harus memiliki persepsi yang positif terhadap perawat profesional serta memiliki motivasi yang tinggi untuk melanjutkan ke program profesi. Masih banyak lulusan sarjana keperawatan yang belum semuanya melanjutkan ke program profesi. Tujuan penelitian ini adalah untuk mengidentifikasi hubungan antara persepsi tentang perawat profesional dan motivasi mahasiswa keperawatan reguler tingkat akhir melanjutkan ke program profesi. Desain penelitian ini menggunakan cross-sectional. Sampel penelitian yaitu dengan cara cluster sampling sebanyak 304 responden mahasiswa reguler tingkat akhir di empat institusi pendidikan profesi keperawatan di Jakarta. Hasil uji Chi-square menunjukkan terdapat hubungan yang bermakna antara persepsi tentang perawat profesional dan motivasi mengikuti program profesi.

ABSTRACT

Nursing students should possess positive perception on nursing profession and high motivation to advance into clinical practice program. There are many bachelors of nursing who are yet to advance into clinical practice program. This study aimed to identify relationship between perception on professional nurses and motivation to advance into clinical practice program in senior students of regular program. The study design was cross sectional. 304 students from four different nursing institutions in Jakarta were selected through cluster sampling technique. Chi square analysis revealed a significant correlation between perception on professional nurses and motivation to advance into clinical practice program.
