Abstrak

Asuhan keperawatan psikososial spiritual sering diabaikan. Dibuktikan dengan jarang munculnya diagnosa psikososial spiritual di ruang rawat inap Rumah Sakit Umum. Tujuan penelitian ini untuk mengetahui efektifitas pelatihan terhadap pengetahuan perawat dan keakuratan diagnosa psikososial spiritual. Metodologi penelitian ini merupakan penelitian kuantitatif dengan quasi experimental design dan pendekatan one group pretest-posttest. Sampel penelitiannya adalah seluruh perawat yang pernah mengikuti pelatihan tentang pengkajian psikososial yang berjumlah 33 orang. Analisa data menggunakan uji Wilcoxon. Hasil penelitian ini menunjukkan bahwa terdapat peningkatan yang signifikan terhadap pengetahuan perawat 29,28 dan keakuratan diagnosa 88,25 . Setelah pelatihan, hasil observasi menunjukkan bahwa perumusan diagnosa keperawatan psikososial spiritual terdapat pada semua dokumentasi pasien kelolaan perawat yang memenuhi kriteria ketepatan perumusan dan kelengkapan komponen Problem Etiologi Signs/symptoms hingga munculnya intervensi psikososial spiritual. Hasil ini perlu dipertahankan, ditingkatkan, dan didukung oleh pihak manajemen Rumah Sakit Umum.

.....Psychosocial spiritual nursing care is often overlooked. It is proven by the rare emergence of psychosocial spiritual diagnosis in the inpatient wards of General Hospital. This study is to reveal the effectiveness of training on nurses' knowledge and accuracy in psychosocial spiritual diagnosis. Quantitative research method with quasi experimental design was employed in this study using one group pretest posttest. The research sample is 33 nurses who had attended training on psychosocial assessment. Wilcoxon test was used for data analysis. This study showed that there was a significant increase on the nurses' knowledge 29.28 and nurses' diagnostic accuracy 88.25 . After the training, the results of the observations indicated the formulation of psychosocial spiritual nursing diagnoses was found in all documentation of the client managed by the nurses who meet the criteria of the accuracy of the formulation and completeness of the Problem Etiology Signs symptoms component until the emergence of psychosocial spiritual intervention. These results need to be maintained, upgraded, and supported by the management of the General Hospital.
