Abstrak

Pada tahun 2017 sebanyak 69% anak muda diketahui pernah melakukan cyberbullying (Ditch The Label, 2017). Perilaku ini tidak hanya terjadi pada remaja tetapi juga dewasa. Penelitian menemukan bahwa cyberbullying memiliki hubungan dengan kepribadian Dark Triad (Goodboy, & Martin, 2015; Kircaburun, Demetrovics & Tosunta; 2018) dan harga diri (Pyalski, 2012). Kepribadian Dark Triad terdiri dari 3 sifat yaitu Psikopati, Machiavellianisme, dan Narsisisme. Pada penelitian ini kepribadian Dark Triad diukur pada tingkat subkilinis. Semakin tinggi kepribadian Dark Triad seseorang maka semakin tinggi kecenderungan melakukan cyberbullying. Pada kepribadian Dark Triad individu memiliki harga diri yang tinggi. Sementara, harga diri yang tinggi akan berkorelasi dengan perilaku cyberbullying. Penelitian ini bertujuan untuk melihat peran harga diri sebagai mediator dalam hubungan antara kepribadian Dark Triad dan kecenderungan cyberbullying pada usia dewasa awal. Partisipan penelitian terdiri dari 292 partisipan dengan rentang usia 20-35 tahun. Hasil analisis mediasi dengan menggunakan PROCESS menemukan bahwa harga diri memediasi secara signifikan terhadap hubungan antara sifat Psikopati dan Narsisisme dan cyberbullying.

In 2017 a survey found that 69% of young people did cyberbullying (Ditch The Label, 2017). Cyberbullying does not only occur in adolescents but also adults. Previous research found that cyberbullying had a relationship with Dark Triad personality (Goodboy, & Martin, 2015; Kircaburun, Demetrovics & Tosunta; 2018) and self-esteem (Pyalski, 2012). The Dark Triad personality consists of 3 characteristics, namely Psychopathy, Machiavellianism, and Narcissism. In this study Dark Triad personality measured in subclinical population. People who have higher Dark Triad personality will have higher tendency to cyberbullying. Individuals in Dark Triad personality have high self-esteem. High self-esteem correlates with cyberbullying. This study aims to see the role of self-esteem as a mediator in the relationship between Dark Triad personality and cyberbullying in early adulthood. The study participants consisted of 292 participants with an age range of 20-35 years. Researcher used Cyberbullying Scale, Rosenberg Self-Esteem Scale and Short Dark Triad Scale for measurement tools. The results of mediation analysis using PROCESS found that self-esteem mediated significantly in relationship between Psychopathic and Narcissistic traits with cyberbullying.
