

Carbohydrate-based vaccines and immunotherapies

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20481817&lokasi=lokal>

Abstrak

Summary:

Studies of vaccines derived from carbohydrate antigens have seen great progress. Synthetic carbohydrate-based vaccines, including polysaccharides, neoglycoproteins, and neoglycolipids, have been explored or used to prevent and treat bacterial and viral infections, cancer, and other diseases.
