Abstrak

This study aims to measure and analyze inclusive growth rate in Indonesia by using per capita expenditure data from Indonesian population. Inclusiveness of growth is observed from growth incidence curve and pro poor growth approach using poverty equivalent growth rate (pegr) method. It also sees the effect of growth and income redistribution on poverty change using decomposition of poverty through shapley value. This research is divided into periods, i.e. 2012-2014 and 2014-2016 by grouping the territory of Indonesia into three areas, i.e. Java and Bali, Sumatra and Kalimantan island, and Eastern Indonesia. The result shows that in 2012-2014, the income growth in Indonesia is inclusive, while in 2014-2016 its growth is not inclusive yet. This is due to the effect of economic growth still hampered by the effect of income inequality over the years 2014 to 2016.
