Data was collected from 209 respondents who worked at pharmaceutical industry. Based on the data analyzed by Structural Equation Modelling (SEM) Lisrel 8.7, work engagement was found to mediate the relationship between workplace fun and employee voice behavior. In addition, each of the three forms of workplace fun which consists of fun activities, coworker socializing and manager support for fun were demonstrated to be significantly and positively related to work engagement. However, only coworker socializing which significantly and positively related to constructive voice behavior and only coworker socializing and manager support for fun which significantly and negatively related to destructive voice behavior.</p>
