ABSTRAK

Phyllanthus is a giant genus of Euphorbiaceae with 1200 species. Phyllanthus spp. have long been used in folk medicine to treat several diseases. Generally Phyllanthus has aphrodisiac, diuretic, and purgative properties. In Indonesia, the species that used in medicine are *P. acidus*, *P. buxifolius*, *P. emblica*, *P. niruri* dan *P. urinaria*. Bogor Botanic Gardens has collected and conserved Phyllanthus spp. Since 1919.
