Abstrak

Orchid is a family with most diverse and the largest species number. Many of them are popular as ornamental plants because of their unique flowers. The interesting thing about orchids is not just the flowers, but also the leaves. Not a few species of orchids that have beautiful leaves. There are at least 9 genera whose members have attractive foliage described in this paper namely *Anoectochilus*, *Collabium*, *Corybas*, *Goodyera*, *Liparis*, *Macodes*, *Nephelaphyllum*, *Nervilia*, dan *Paphiopedilum*.
