**ABSTRACT**

This research was a correlation study consisted of two independent variables, namely knowledge of disasters and headman leadership in addressing flood, and the dependent variable, namely the citizen's behavioral in flood awareness. Results of this study yielded three conclusions, namely: 1) correlation between knowledge of the disaster with the citizen's behavioral in flood awareness with a correlation coefficient ( $r_{y1}$ ) of 0.643 and the coefficient of determination ( $r^2_{y1}$ ) of 0.413. 2) correlation between leadership of the headman in addressing flood with citizen's behavioral in flood awareness, with a correlation coefficient ( $r_{y2}$ ) of 0.950 and a coefficient of determination ( $r^2_{y2}$ ) of 0.902. 3) correlation between knowledge of disasters and leadership headman in addressing flood together with citizen's behavioral in flood awareness with a correlation coefficient ( $r_{y12}$ ) of 0.950 and a coefficient of determination ( $r^2_{Y12}$ ) of 0.903.
