ABSTRACT

Objective of research is to find out the knowledge of function of the national park and state of social economy, to the community participation of Gunung Gede Pangrango National Park. conservation Survey research was carried out in Cianjur village, West Java with taken sample about 233 respondents. This research has three conclusions as follow1. There is a very significant positive relationship between the knowledge of the function of national park with the participation of people in conservation of Gunung Gede Pangrango National Park by the regression equation $\hat{Y}_1 = 140.606 + 0.632 X_1$, with the correlation coefficient value of $r_{y1} = 0.528$ and the determination of the coefficient (r^2) = 0.279, There is a very significant positive correlation between the social economy status with the participation of people in conservation of Gunung Gede Pangrango National Park by the regression equation $\hat{Y}_2 = 54.487 + 0.654 X_2$ and correlation coefficient $r_{y2} = 0.542$ and than the coefficient determination (r^2) was equal to 0.294, there is a very significant relationship between the knowledge of function of national park and the social economy status together with the participation of people in conservation of Gunung Gede Pangrango National Park by the regression equation $\hat{Y}_{12} = 84.737 + 0.260 X_1 + 0.420 X_2$, with the value of the coefficients correlation of $r_{y12} = 0.551$ and the determination of the coefficient (r^2) = 0.303 Based on these results, it could be concludes that the community participation of conservation of Gunung Gede Pangrango National Park could be improved through increase knowledge of function national park and social economy states.
