ABSTRACT

The objective of the research is to determine the correlation amongs knowledge of pollution, naturalis intelligence, and environmental protection participation. Research used survey method, with 101 respondents. Sampling was done by proportionatecluster/area random sampling. Data analysis used simple correlation and regression and also double correlation and multiple regression. The results yielded three conclusions; there are a significant positive relationship between knowledge of environmental protection participation and naturalist intelligence either individually or jointly with housewife's participation in environtmental protection.
