Abstrak

Penelitian ini menganalisis *collaborative governance* pada integrasi moda transportasi angkot dalam pelaksanaan Program Jak Lingko Di Provinsi DKI Jakarta dalam rangka mewujudkan *smart mobility*. Kajian ini menggunakan pendekatan post positivist untuk menganalisa proses *collaborative governance* yang terjadi pada integrasi moda transportasi dalam sistem BRT Transjakarta sebagai bagian dari pelaksanaan program Jak Lingko. Proses collaborative governance yang terjadi dianalisis dengan lima dimensi model *collaborative governance* yang terdiri atas dimensi konteks sistem umum, dimensi pendorong, dimensi dinamika kolaborasi, dimensi aksi kolaboratif dan dimensi dampak kolaborasi. Model *Collaborative Governance* ini dikembangkan dengan memasukkan parameter *smart mobility* pada dimensi dampak kolaborasi.

.....This study aim to investigate collaborative governance in the integration of angkot as one of transportation modes within the implementation the Jak Lingko Program in order to realize smart mobility in DKI Jakarta. This study uses a post positivist approach to analyze the collaborative governance process that occurs in the integration of mini bus "angkot" as one of transportation modes into the Transjakarja's BRT system as an integral part of the implementation of the Jak Lingko program. The collaborative governance process that took place was analyzed with five dimensions of the collaborative governance model consisting of the dimension of the general system context, the driving dimension, the dimensions of collaboration dynamics, the dimensions of collaborative action and the dimensions of the impact of collaboration. This Collaborative Governance model was developed by incorporating smart mobility parameters into the dimensions of collaboration impact.
