Abstrak

Praktik cuci tangan merupakan faktor kunci dalam menurunkan dan mencegah infeksi terkait pelayanan kesehatan. Masih rendahnya praktik cuci tangan di kalangan petugas kesehatan menyebabkan angka infeksi di rumah sakit masih cukup tinggi. Penelitian ini bertujuan mengidentifikasi elemen yang menjadi penyebab masih rendahnya praktik cuci tangan enam langkah melalui pendekatan elemen strategi implementasi multimodal WHO di Unit Rawat Inap Rumah Sakit Mitra Medika Batanghari. Dengan pendekatan kualitatif, Hasil penelitian menunjukkan praktik cuci tangan enam langkah baik (89,6%) dan ketersediaan handruber berbahan dasar alkohol merupakan faktor yang paling dominan berkontribusi terhadap pelaksanaan praktik cuci tangan enam langkah.

Kata Kunci : Praktik Cuci Tangan, Strategi Implementasi WHO, infeksi terkait pelayanan kesehatan.

<hr />Hand washing practice is key factor to decrease and prevent of health-care associated infections. Poor of hand washing practice among healthcare workers causing hospital infection rates are still high. This study aimed to identify the elements that cause the low six-step of hand washing practice through the element of WHO multimodal strategy implementation approach in Mitra Medika Batanghari Hospital. The design was cross-sectional, used quantitative approach, continued by qualitative approach. The results showed that the six-step of hand-washing practice was good (89,6%) and availability of alcohol based handrub to be the most dominant factor contributed to the implementation of six steps of hand washing practice.

Keywords: Hand washing practice, Implementation strategy WHO, Health-care associated infections.
