## Abstrak

Kondisi pasien selama di Instalasi Gawat Darurat dapat mengalami perburukan, sehingga perlu melakukan deteksi dini dengan *Early Warning Score* yang harus dilaksanakan sesuai dengan Standar Prosedur Operasional. Penelitian ini bertujuan untuk mengetahui persepsi perawat mengenai kesesuaian pelaksanaan *Early Warning Score*. Penelitian deskriptif ini menggunakan *purposive sampling* yang melibatkan 70 perawat di Instalasi Gawat Darurat. Hasil penelitian ini menunjukkan bahwa 44 perawat (62,9%) telah mempersepsikan dirinya melaksanakan *Early Warning Score* sesuai Standar Prosedur Operasional. Penelitian ini diharapkan dapat menjadi data awal untuk penelitian selanjutnya dan menjadi evaluasi bagi perawat dalam pelaksanaan *Early Warning Score* sesuai Standar Prosedur Operasional di Rumah Sakit.

The condition of the patient while in the Emergency Department can be deteriorating, so it is necessary to conduct early detection with an *Early Warning Score* which must be carried out in accordance with Standard Operating Procedures. This study aims to determine the perceptions of nurses regarding the suitability of the implementation of *Early Warning Score*. This descriptive study used *purposive sampling* involving 70 nurses in the Emergency Department. The results of this study indicate that 44 nurses (62.9%) have perceived themselves to be implementing *Early Warning Score* according to the Standard Operating Procedures. This research is expected to be preliminary data for further research and can be used as evaluation for nurses in implementing *Early Warning Score* according to the Standard Operating Procedures at the hospital.
