Abstrak

Maternity nurses are authorized health workers that provide antenatal care, but their roles and function in antenatal care services are not recognized by the public. This research aims to reveal the experience of pregnant women during antenatal visits in private clinic maternity nursing. Six pregnant women selected using purposive sampling underwent an in-depth interview in this descriptive phenomenological study. Data were analyzed through thematic content analysis with Moustakas approach. Three themes were identified in this study: 1) women experience good communication with maternity nurses; 2) women receive family-centered nursing care; 3) the schedule, cost, facility, and types of service meet the participants' needs. This study suggests for nurses to improve their competencies in delivering antenatal care according to clients' needs.
