

Energy sector: a systemic analysis of economy, foreign trade and legal regulations

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20518480&lokasi=lokal>

Abstrak

This book is a comprehensive economic and legal study of the theoretical and practical aspects of the problems of increasing energy efficiency; self-motivation of energy saving by business entities within the framework of their corporate responsibility; regulatory mechanisms to stimulate energy conservation in the economy; civil-law regulation of foreign trade turnover of energy resources between economic entities of the Russian Federation and companies of member states of international integration associations – the CIS, EEMP, the EU and BRICS. It argues that technological energy saving plays a key role in reducing the energy intensity and increasing the energy efficiency of the economy, and substantiates the need for institutional support – including legal support for the participation of the Russian Federation – in various forms of international cooperation. Lastly, based on an analysis of current legislation, programs and recommendations, judicial and contractual practices, customs and trade procedures, it offers proposals for the developing, improving and unifying civil law regulation of obligations in the sphere of international trade in energy resources, as well as methodological recommendations for drafting foreign trade contracts in the energy sector.
