Abstrak

Suatu industri farmasi harus dapat memastikan kebersihannya bukan hanya tentang bangunan dan fasilitas namun juga termasuk alat-alat penunjang yang digunakan. Untuk memastikan apakah prosedur yang dilakukan telah sesuai, maka dilakukan validasi. Resep merupakan hal terpenting sebelum pasien menerima obat. Dalam alur pelayanan resep, apoteker wajib melakukan skrining resep. Ada tiga aspek yang perlu diperhatikan dalam skrining resep yakni kelengkapan administratif, kesesuaian farmasetik dan pertimbangan klinis untuk menjamin legalitas suatu resep dan meminimalkan kesalahan pengobatan. Salah satu pelayanan kefarmasian yang juga harus dilakukan dalam rangka menangani masalah terkait obat adalah Pemantauan Terapi Obat (PTO). Penyimpanan obat, bahan obat, alat kesehatan dan produk lainnya sesuai kategori seringkali menjadi hal yang cukup sulit di PBF PT Anugerah Pharmindo Lestari khususnya di PBF cabang Bogor. Terutama penyimpanan barang di area loading APL cabang Bogor sehingga dibutuhkan tanda khusus untuk memberikan perbedaan setiap area loading berbagai daerah. Penyusunan Protokol Cleaning Validation, Pengkajian resep dan PTO pasien loyal, dan kegiatan pembuatan penanda area loading daerah Cianjur dilakukan pada saat Praktik Kerja Profesi Apoteker di PT Global Onkolab Farma, Apotek Roxy Poltangan, dan PT Anugerah Pharmindo Lestari. Periode pengerjaan mulai dari Juli – November 2021.

.....A pharmaceutical industry must be able to ensure hygiene, not only about buildings and facilities but also including supporting equipment. To ensure whether the procedures carried out are appropriate, validation is carried out. Prescription is the most important thing before the patient receives the drug. In the prescription service flow, pharmacists are required to screen prescriptions. There are three aspects that need to be considered in prescription screening, namely administrative completeness, pharmaceutical suitability and clinical considerations to ensure the legality of a prescription and minimize medication errors. One of the pharmaceutical services that must also be carried out in order to deal with drug-related problems is Drug Therapy Monitoring (DTM). Storage of drugs, medicinal ingredients, medical devices and other products according to categories is often quite difficult at PT Anugerah Pharmindo Lestari PBF, especially at PBF Bogor branch. Especially the storage of goods in the APL loading area of the Bogor branch, so a special sign is needed to distinguish each loading area from various regions. The preparation of the Cleaning Validation Protocol, review of prescriptions and DTM of loyal patients, and activities of making markers for the loading area in the Cianjur area were carried out during the Pharmacist Professional Practice at PT Global Onkolab Farma, Roxy Poltangan Pharmacy, and PT Anugerah Pharmindo Lestari. The working period starts from July – November 2021.
