Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20527946&lokasi=lokal>

Abstrak

Serah terima antar shift yang dilaksanakan belum konsisten mencakup tanggung jawab asuhan keperawatan. Serah terima antar shift yang kurang baik berpotensi mengganggu pengelolaan pemberian obat oleh perawat serta munculnya insiden keselamatan pasien. Tujuan penelitian ini untuk mengidentifikasi hubungan serah terima antar shift dengan pengelolaan pemberian obat oleh perawat. Penelitian kuantitatif ini menggunakan rancangan analitic-correlational dengan pendekatan cross sectional. Sampel sebanyak 152 perawat pelaksana diambil secara non probability sampling dengan convinience. Hasil penelitian didapatkan ada hubungan yang bermakna antara serah terima antar shift dengan pengelolaan pemberian obat oleh perawat $p < 0.001$. Faktor yang memiliki pengaruh signifikan adalah pendidikan terakhir dan komunikasi yang obyektif antar perawat. Strategi yang dapat dilakukan manajer keperawatan adalah penilaian manajemen risiko terkait serah terima antar shift dan pengelolaan pemberian obat serta pendidikan berkelanjutan bagi perawat.

.....Nursing shifts handover carried out has not consistently covered the responsibilities of nursing care. Poor nursing shift handover has the potential to interfere with nursing drug administration by nurses and the emergence of patient safety incidents. The purpose of this study was to identify the relationship between nursing shift handover with nursing drug administration. This quantitative study used an analytic-correlational design with a cross sectional approach. A sample of 152 nurses was taken by non-probability sampling with convenience. The results showed that there was a significant relationship between nursing shift handover and nursing drug administration $p < 0.001$. Factors that have a significant effect are recent education and objective communication between nurses. Strategies that can be carried out by nursing managers are risk management assessments related to handover between shifts and management of drug administration as well as continuing education for nurses.
