Abstrak

Skripsi ini membahas mengenai gambaran alur pelaporan kasus COVID-19 yang ada di masyarakat, khususnya Kecamatan Pamulang. Penelitian ini adalah penelitian mixed method, yaitu secara kuantitatif dan kualitatif dengan desain studi deskriptif. Variabel yang akan diteliti adalah pengetahuan masyarakat mengenai COVID-19, persepsi masyarakat mengenai COVID-19, dan upaya penemuan kasus COVID-19 di masyarakat. Hasil penelitian kuantitatif menunjukkan bahwa pengetahuan masyarakat sudah cukup baik namun masih ada hal-hal yang perlu lebih diedukasi seperti pengetahuan mengenai sakit tenggorokan, diare, dan nyeri otot juga merupakan gejala COVID-19. Hal lain yang perlu diedukasi adalah media sebagai sarana menyampaikan informasi harus memuat informasi secara lengkap. Sedangkan hasil penelitian kualitatif adalah alur pelaporan kasus COVID-19 sudah baik dilakukan dan tidak memiliki yang berarti pada pelaksanaannya.

.....This thesis discusses the description of the flow of reporting COVID-19 cases in the community, especially Pamulang District. This research is a mixed method research, which is quantitative and qualitative with a descriptive study design. The variables to be studied are public knowledge about COVID-19, public perception of COVID-19, and efforts to find COVID-19 cases in the community. The results of the quantitative research show that public knowledge is good enough but there are still things that need to be more educated such as knowledge about sore throats, diarrhea, and muscle aches which are also symptoms of COVID-19. Another thing that needs to be educated is that the media as a means of conveying information must contain complete information. While the results of qualitative research are the flow of reporting cases of COVID-19 has been well done and has no meaning in its implementation.
