Abstrak

Accessibility and Other Factors Related with Utilization of Treatment Curative Services at Baros Community Health Center For its Community , Sukabumi Municipality In April 2004 Utilization of curative services at Baros Community Health Centre for its community is low, especially from Jaya Mekar Village and Sudajaya Hilir Village.

This study aimed to describe the utilization of curative at Baros Community Health Centre and factors related to at Sukabumi municipality in April 2004.

Design of the study was across sectional one. This study aimed to see the correlation among accessibility, quality reason, education, need of health services , financial source and family income with utilization of curative services at Community Health Centre.

The respondents were families in Baros Sub District who have experienced curative services at Baros Community Health Centre and other surrounding Community Health Centre. Total samples were 100 respondents, selected by systematic random sampling selection technique.

The results of study showed that accessibility , education and family income were associated with utilization of curative services at Community Health Centre while quality reason, need of health services and financial source had no association with it.

Multivariate analysis was used in this study to explain the most associated factor with the utilization of curative services . By this analysis , accessibility was found significantly associated with it. Odd Ratio 20,68 ,P= 0,000 (95%CT ; 6,845 - 62,479).

The proportion of curative services utilization at Baros Community Health Centre by its community showed 50 % . This study recommends a need to think about optimalization of health services visit at remote areas at Sudajaya Hilir Health Clinic,lth Centre, periodic health services visit at remote areas and community poverty alleviation project. There is also a need to think about raising and developing of curative services at Baros Community Health Centre, increasing community coverage, conducting community transportation need survey, and promoting education.
