Abstrak

This article tries to give an image on whether or not european Law can be considered as a genre in law. The treaty of the European Union, the institution of European Union itself, the role of European Court of Justice, and the draft of the European constitution all combined made the European Union not just an ordinary Regional International Organization but more a distinctful European Federation, because it still holds the sovereignty of each member states. What even more interesting to analyze is how European law combines the tradition of Roman Law and tradition of the Anglo Saxon Law. Due to these distinctive features, any country conducting bilateral relations with any of the member states should also put some considerations to the European law that will affect their bilateral relations.
