## **Abstrak**

Anak berisiko mengalami Covid-19 karena daya tahan tubuh dan imun yang lemah serta kurangnya menerapkan protokol kesehatan. Penelitian ini bertujuan untuk mengidentifikasi hubungan tingkat pengetahuan dan penerapan protokol kesehatan Covid-19 pada siswa sekolah dasar negeri di Depok. Penelitian ini menggunakan deskriptif kuantitatif dengan pendekatan cross sectional. Pengumpulan data menggunakan teknik cluster sampling terhadap 388 siswa kelas IV, V dan VI. Data dianalisis menggunakan uji Chi-square. Hasil penelitian ini menunjukkan tidak terdapat hubungan yang signifikan antara pengetahuan dan penerapan protokol kesehatan Covid-19 ( $p$  value = 0.292). Penelitian ini mendapatkan hasil bahwa 99,5% responden memiliki tingkat pengetahuan yang baik tentang Covid-19. Akan tetapi penerapan protokol kesehatan Covid-19 yang baik sebesar 64,6%. Upaya edukasi untuk meningkatkan penerapan protokol kesehatan diperlukan untuk mencegah penyebaran Covid-19

.....Children are at risk of being infected by Covid-19 because of their immunity status and lack of attitude toward the Covid-19 health protocol. This study aimed to identify the relationship between the level of knowledge and Covid-19 Health Protocol Attitudes in Elementary Public Schools in Depok. The research design used a quantitative descriptive with a cross-sectional approach by employing a cluster sampling technique and involved a sample of 388 students in classes IV, V, and VI. The data were analyzed with the Chi-square test. The results showed that there was no significant relationship between knowledge and Covid-19 Health Protocol attitude ( $p$ -value = 0.292). As many as 99,5% of respondents have a good knowledge level about Covid-19, whereas only 64,6% of the respondents implemented good covid-19 health protocol. This research recommends covid-19 health protocol in order to decrease the level of covid-19 prevalence.
