Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=9999920524347&lokasi=lokal>

Abstrak

Berdasarkan bukti yang ada menyebutkan bahwa serah terima di samping tempat tidur atau bedside handover dapat mengurangi pasien jatuh, waktu pemulangan, dan biaya lembur, sekaligus meningkatkan kolaborasi tim. Metode penulisan yang digunakan adalah Case Report, tahapan-tahapan yang dilakukan yaitu menemukan fenomena, melakukan observasi dan wawancara, mengidentifikasi masalah, menerapkan evidence-based practice dan penulisan laporan kasus. Fenomena yang ditemukan yaitu di ruang rawat inap Rumah Sakit X melakukan handover hanya di nurse station, sehingga dilakukanlah penerapan langkah-langkah bedside handover berdasarkan evidence-based practice. Hasil dari penerapan evidence-based practice tersebut masih kurang optimal dikarenakan sosialisasi tentang penerapan evidence-based practice baru dilakukan dua kali.

.....Based on evidence, bedside handover can reduce patient falls, discharge time, and overtime costs, and also increasing team collaboration. The writing method uses Case Report, the stages that used are finding phenomena, conducting observations and interviews, identifying problems, applying evidence-based practice and writing case reports. The phenomenon that was found is the ward of X Hospital, handovers were only carried out at the nurse's station, so that bedside handover steps were implemented based on evidence-based practice. The results of the application of evidence-based practices are still less optimal due to the socialization of the application of evidence-based practices has only implemented twice.
