Abstrak

Cold chain atau rantai dingin merupakan sebuah sistem rantai pasok yang mempertimbangkan tingkatan suhu dalam prosesnya. Cold chain untuk menjaga produk beku atau dingin dalam lingkungan dengan temperatur tertentu baik selama produksi, penyimpanan, transportasi, proses dan penjualan. Selama penyimpanan, Cold Chain Product sangat rentan karena harus mempertimbangkan suhu dan tata letak. Atas dasar pertimbangan diatas, maka dilakukan perbandingan penyimpanan Cold Chain Product (CCP) di KFTD Jakarta 3 dengan regulasi yang ada di Indonesia.

.....Cold chain or cold chain is a supply chain system that considers the temperature level in the process. Cold chain to keep frozen or cold products in an environment with a certain temperature both during production, storage, transportation, processing and sales. During storage, Cold chain products are very vulnerable because they have to consider temperature and layout. On the basis of the above considerations, a comparison was made of Cold Chain Product (CCP) storage at KFTD Jakarta 3 with existing regulations in Indonesia.
