Abstrak

Pemantauan Terapi Obat (PTO) adalah salah satu pelayanan farmasi klinis yang diberikan Apoteker untuk memastikan terapi obat yang aman, efektif dan rasional bagi pasien dengan tujuan meningkatkan efektivitas terapi dan meminimalkan risiko Reaksi Obat yang Tidak Dikehendaki (ROTD). Pencatatan rekam medis pasien dianalisis menggunakan metode Subjective, Objective, Assessment dan Intervention (SOAP) untuk mengidentifikasi masalah terkait obat atau drug related problems (DRPs) berdasarkan klasifikasi PCNE (Pharmaceutical Care Network Europe). Apoteker dapat memberikan rekomendasi atau merencanakan intervensi sesuai literatur farmakoterapi, guideline dan evidencebased medicine kepada tenaga kesehatan lainnya.

.....Drug Therapy Monitoring (PTO) is one of the clinical pharmacy services provided by Pharmacists to ensure safe, effective and rational drug therapy for patients with the aim of increasing therapeutic effectiveness and minimizing the risk of Unwanted Drug Reactions (ROTD). Recording patient medical records is analyzed using the Subjective, Objective, Assessment and Intervention (SOAP) method to identify drug-related problems (DRPs) based on the PCNE (Pharmaceutical Care Network Europe) classification. Pharmacists can provide recommendations or plan interventions according to pharmacotherapy literature, guidelines and evidence-based medicine to other health workers.
