Abstrak

Penyimpanan merupakan salah satu bentuk pengelolaan sediaan farmasi di Puskesmas. Penyimpanan obat pada gudang obat program di Puskesmas Kecamatan Ciracas dinilai belum memenuhi prinsip 5R (ringkas, rapi, resik, rawat, rajin) dikarenakan banyaknya kotak-kotak obat yang berada di luar lemari penyimpanan, banyaknya barang-barang yang bukan kepentingan obat program berada di gudang yang mengakibatkan ruangan gudang terlihat tidak rapi atau tidak teratur. Metode yang digunakan adalah dengan melakukan observasi terhadap gudang obat program yang terdapat di unit farmasi dan melakukan implementasi perbaikan tata letak ulang terhadap lemari-lemari dan meja yang ada. Kondisi gudang obat program yang sekaligus menjadi ruang konseling setelah dilakukan tata letak ulang memenuhi prinsip 5R yang dapat meningkatkan kenyamanan pasien saat konseling maupun bagi tenaga kesehatan yang melakukan pengambilan obat di gudang tersebut. Apoteker bertanggung jawab untuk memastikan prinsip 5R agar selalu diterapkan terutama dalam penyimpanan obat di gudang sehingga diharapkan selalu tercipta kondisi bersih dan nyaman sehingga mutu obat di dalamnya juga tetap terjaga.

..... Storage is a form of management of pharmaceutical preparations at the Puskesmas. Drug storage at the program drug warehouse at the Ciracas District Health Center was assessed as not fulfilling the 5R principles (concise, neat, clean, caring, diligent) due to the large number of medicine boxes outside the storage cupboard, many items that are not of program drug interest are in warehouse which causes the warehouse space to look untidy or disorganized. The method used is to observe the program drug warehouse in the pharmacy unit and re-implement the layout of the existing cabinets and tables. The condition of the program drug warehouse which also serves as a counseling room after the re-layout meets the 5R principles which can increase patient comfort during counseling as well as for health workers who pick up drugs in the warehouse. Pharmacists are responsible for ensuring that the 5R principles are always applied, especially in storing drugs in warehouses so that it is hoped that conditions will always be clean and comfortable so that the quality of the medicines inside is also maintained.
