Abstrak

Praktik keperawatan residensi yang dilakukan di Rumah Sakit Umum Pusat Persahabatan dengan kekhususan respiration diharapkan dapat mengatasi masalah pernapasan. Selama proses residensi menerapkan intervensi berdasarkan evidence based nursing, mampu menjadi seorang Clinical Care Manager (CCM) sebagai konsultan staf keperawatan, dan memberikan terapi keperawatan yang profesional. Dalam memberikan asuhan keperawatan pada kasus kelolaan pasien dengan Bronkiektasis dan 30 kasus resume menggunakan teori Henderson 14 kebutuhan dasar manusia yang menunjukkan peran perawat sebagai pemberi asuhan keperawatan dalam membantu individu baik dalam keadaan sehat maupun sakit, melalui usahanya melakukan berbagai aktivitas guna mendukung kesehatan dan penyembuhan individu atau proses meninggal dengan damai. Masalah keperawatan yang banyak muncul yaitu tentang pemenuhan kebutuhan bernapas normal. Penerapan EBN cold application dan latihan napas dan batuk untuk menurunkan tingkat nyeri pada pasien terpasang chest tube. Pelaksanaan proyek inovasi pengembangkan video edukasi monitoring dan perawatan di rumah pasien terpasang WSD sebagai media self-management bagi perawat ruang rawat dan pasien yang terpasang WSD. Hasil analisis praktik residensi keperawatan didapatkan bahwa asuhan keperawatan menggunakan pendekatan teori Henderson bertujuan untuk membantu sesegera mungkin kemandirian pasien. Penerapan cold application dan latihan napas dan batuk dapat menurunkan skor nyeri pasien terpasang chest tube. Proyek inovasi video edukasi monitoring dan perawatan di rumah pasien terpasang WSD sebagai media self-management meningkatkan pengetahuan perawat dan kemandirian pasien.

.....The practice of residency nursing conducted at RSUP Persahabatan with the specificity of respiration is expected to overcome respiratory problems. During the residency process apply interventions based on evidence-based nursing, be able to become a Clinical Care Manager (CCM) as a nursing staff consultant, and provide professional nursing therapy. In providing nursing care in cases managed by patients with bronchiectasis and 30 resume cases using Henderson's theory 14 basic human needs that show the role of nurses as nursing care providers in helping individuals both in health and illness, through their efforts to carry out various activities to support the health and healing of individuals or the process of dying peacefully. Many nursing problems arise are about meeting the needs of normal breathing. Application of EBN cold application and breathing and coughing exercises to reduce pain levels in chest tube patients. The implementation of an innovation project to develop educational videos for monitoring and care at home of WSD-installed patients as a self-management medium for nurses, inpatient rooms and patients installed with WSD. The results of the analysis of nursing residency practice found that nursing care using Henderson's theoretical approach aims to help as soon as possible the independence of patients. The

application of cold application and breathing and coughing exercises can reduce the pain score of patients attached to the chest tube. Educational video innovation project, monitoring and care at home installed with WSD as a self-management medium increases nurses' knowledge and patient independence.
