Abstrak

Kesesuaian obat adalah obat yang digunakan untuk pelayanan kesehatan di puskesmas diharapkan sama dengan obat yang tercantum dalam formularium nasional. Obat yang ada di puskesmas harus disesuaikan dengan kebutuhan untuk pelayanan pengobatan pada masyarakat di wilayah kerjanya. Pengambilan data dilakukan secara retrospektif yaitu menggunakan data formularium puskesmas matraman tahun 2023. Persentase kesesuaian berdasarkan item obat pada formularium puskesmas di puskesmas kecamatan matraman tahun 2023 sebesar 70,28%. Ketidaksesuaian obat antara formularium nasional dengan formularium puskesmas matraman disebabkan oleh beberapa pertimbangan seperti puskesmas mempertimbangkan preferensi dan kebutuhan kesehatan masyarakat setempat, banyaknya jumlah pasien yang datang ke puskesmas yang memerlukan penggunaan obat tersebut daripada obat yang ada di fornas, pemilihan dan pertimbangan klinis oleh dokter dan petugas kesehatan berdasarkan kondisi spesifik pasien.

.....

Drug suitability means that the drugs used for health services at community health centers are expected to be the same as the drugs listed in the national formulary. The medicines available at the community health center must be adapted to the needs of medical services for the community in the work area. Data collection was carried out retrospectively, namely using the 2023 Matraman Community Health Center formulary data. The percentage of conformity based on drug items in the health center formulary in the Matraman sub-district health center in 2023 is 70.28%. The discrepancy between medicines between the national formulary and the Matraman Community Health Center formulary is caused by several considerations, such as the Community Health Center taking into account the preferences and health needs of the local community, the large number of patients coming to the Community Health Center who require the use of these drugs rather than the drugs available at the Fornas, selection and clinical considerations by doctors and staff. health based on the patient's specific condition.
