Abstrak

Penelitian ini bertujuan untuk menganalisis penerapan collaborative governance dalam pembinaan olahraga prestasi di Indonesia, dengan fokus pada cabang olahraga bulu tangkis. Collaborative governance adalah pendekatan yang menekankan kerjasama antara pemerintah, sektor swasta, dan masyarakat dalam pengambilan keputusan dan pelaksanaan kebijakan publik. Dalam konteks olahraga, penerapan collaborative governance diharapkan dapat meningkatkan efektivitas dan efisiensi pembinaan atlet serta memperkuat transparansi dan akuntabilitas dalam pengelolaan olahraga. Penelitian ini menggunakan pendekatan post-positivisme, teknik pengumpulan data primer dengan wawancara mendalam serta data sekunder melalui studi literatur, analisis melalui teknik triangulasi data, serta menggunakan teori utama Collaborative Governance Tonelli, Sant'Anna, Abbud, dan de Souza (2018). Penelitian ini menyimpulkan bahwa meskipun penerapan collaborative governance telah memberikan dampak positif dalam pembinaan bulu tangkis di Indonesia, masih diperlukan upaya untuk meningkatkan koordinasi dan sinergi antara berbagai pemangku kepentingan, serta memastikan distribusi anggaran yang lebih adil dan proporsional untuk mendukung pencapaian prestasi olahraga yang lebih tinggi di kancah internasional. Penelitian ini merekomendasikan pengembangan lebih lanjut pada sistem kolaborasi untuk memastikan efektivitas dan efisiensi dalam pelaksanaan pembinaan olahraga bulu tangkis.

.....This research aims to analyze the implementation of collaborative governance in the development of competitive sports in Indonesia, with a focus on the badminton sector. Collaborative governance is an approach that emphasizes cooperation between the government, the private sector, and the community in decision-making and public policy implementation. In the context of sports, the application of collaborative governance is expected to enhance the effectiveness and efficiency of athlete development, as well as strengthen transparency and accountability in sports management. This research employs a post-positivist approach, utilizing primary data collection techniques through in-depth interviews and secondary data through literature studies, with data analysis conducted using triangulation techniques. The main theory used is Collaborative Governance by Tonelli, Sant'Anna, Abbud, and de Souza (2018). The research concludes that although the implementation of collaborative governance has had a positive impact on badminton development in Indonesia, efforts are still needed to improve coordination and synergy among various stakeholders and ensure a fair and proportional distribution of funds to support higher sports achievements on the international stage. The study recommends further development of the collaboration system to ensure effectiveness and efficiency in the implementation of badminton sports development.
