Abstrak

Diversity on the lowland pitcher plants (*Nepenthes* spp.) in Central Kalimantan were conducted between August 2005 and September 2006 at three locations study. That is: Barito Ulu, Sebangau and Kasongan district. Survey inventories were used to determine the diversity of *Nepenthes* at the study site. We found sixteen *Nepenthes* at study area, divided nine *Nepenthes* species; *N. albomarginata*, *N. ampullaria*, *N. gracilis*, *N. hirsuta*, *N. mirabilis*, *N. rafflesiana*, *N. reinwardtiana*, *N. stenophylla*, one unidentified *Nepenthes* species and seven natural hybrid; *N. xhookeriana* (*N. rafflesiana* x *N. ampullaria*), *N. xtrichocarpa* (*N. gracilis* x *N. ampullaria*), *N. xneglecta* (*N. gracilis* x *N. mirabilis*), *N. mirabilis* x *ampullaria*, *N. mirabilis* x *rafflesiana*, *N. reinwardtiana* x *N. mirabilis* and *N. reinwardtiana* x *gracilis*. Heath forest and peat swamp forest are generally the habitat of lowland *Nepenthes* at Central Kalimantan.
