FOREWORD

I am so grateful and thankful to Jesus Christ for helping me in every obstacle I faced in finishing my first scientific work. I cannot see Him but I can always feel His presence. In addition, I always want to thank my parents for tirelessly encouraging me and giving me pure freedom to pursue the interest of my life, including my interest in economics. I realize that there always be external factors that can support one in accomplishing something. I must say the greatest direct thanks to my advisor Pak Arianto Arief Patunru (Bang Aco), PhD for his inspiring comments and trust in me in the process of the writing and after the examination. Next, I have to acknowledge the biggest role in developing myself to Badan Otonom Economica (BOE) and its people that happened to have given me some enlightenment in critical discussions, laughter, and cries during my four years in college.

However, due to my lack of memorizing ability and my fair judgement, I shall not mention one by one friends of mine that have given guts and illuminating additional knowledge to the author. I really feel like saying thanks for our really great four years in our beloved campus FEUI. You guys really have given me some meaningful life of what it feels to be a college student. It is not only about studying and getting assignments done. It is about true friendship, lively discussions, sleeping in and skipping classes when the lecturers were boring.

One of the most important persons that contribute mostly to completion of this thesis is Sekar Talenta who was never bored in listening to my complaints in the process of writing this thesis. Thanks for your pure support and encouragement. You always make me feel like getting better every day.

Last but not least, author hopes that this far-from-perfect work can contribute something in the literature of Indonesian growth study.
