M. Rifki Shihab

Pembimbing Tugas Akhir

ABSTRACT

The success of information technology is illustrated by the penetration of mobile communication devices within the society. These devices enable new means of interaction between people and data. This interaction is then called mobile commerce (m-commerce). M-commerce is widely used due to its mobility and ubiquity advantages.

The author is interested to study the cultural effects toward m-commerce adoption in Indonesia, since the nature of communication itself is generally impacted by culture. To do so, the author tries to conduct a research based on cross cultural theories on technology adoption. The author also incorporated the work of Hofstede in [8] to define the cultural profile of Indonesia.

This research mimics the research procedures of Harris et al. which had studied the m-commerce adoption in Hong Kong. Several adjustments were made to fit with Indonesian conditions. This research finds that Indonesia as collectivist culture tends to adopt synchronous m-commerce services and is sensitive to the price of services. As a high power distance culture, Indonesia is more likely to adopt hedonic services. These characteristics of m-commerce adoption can also be found in Hong Kong which has similar cultural profile with Indonesia.

ACKNOWLEDGMENT

Praise to the God Almighty for His grace and mercy so the Author could complete the whole process in the research. During the development of this research, there were many parties that helped the author to work out the obstacles faced. Therefore the author would like to thanks:

1. Papa, Mama, Panji, Galih, and the other family members for their life-time moral and material support.
2. Mr. M. Rifki Shihab for his guidance, critics, suggestions and courage to complete this research.
3. Mrs. Saskya Mary for her help in explaining statistical theories that is used in this research.
4. Fellows of Fasilkom International Class 2004, Riza, Henrio, Agung, Mika, and Panca for their priceless friendship and companion during the author's undergraduate study.
5. Close friends of the author, Alida, Nuril, Ratih, Vidya, Hafiz, Kresna, Wisnu Ibrahim, Zoni, Joji, and Rama for the great times they had. Also Aji, Aurora, Rabindra, and Ario for sharing the 1237 lab.
6. Tiza Putrianti Brahim for her invaluable care and understanding.
7. Research participants who have filled and completed the questionnaire.
8. Conna, Cita, and Anne for proofreading this research.
9. Other parties that have given their support throughout the completion of this research.

The author realises that throughout this research, there exist flaws and imperfections being made, for that reason the author is very keen to any critics and suggestions addressed to this research. Hopefully this research is useful for its reader in the future.
