

Sistem Kekerabatan, Keluarga, dan Peranan Pria dalam Keturunan

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20299431&lokasi=lokal>

Abstrak

Economic and sociological models have been dominating the studies and policies on lowering the fertility rates. One of the interdisciplinary models as used by Terence Hull focusses the unit analysis on the people's preferences in the decision making process, as well as the influence of socio-economic variables, i.e. price and income. Culture and kinship systems are often ignored in those models. This article examines the importance of incorporating the analysis of kinship system in the theoretical models as well as in the policy making process concerning the fertility rate. The significance of kinship system is illustrated by the role of men in the reproductive process as influenced by the kinship system in the patrilineal, matrilineal, and bilateral descents in some ethnic groups in Indonesia.
