Abstrak

R&D institutions have major role in supporting development and competitiveness of national industry, through products are produced. However, until now there is still a gap between R&D institutions as producers of technology and innovation (supply side) and its users (demand side). The purpose of this paper is to determine most appropriate legal entity of unit manager of R&D products based on multi criteria using AHP (analytical hierarchy process), to make institution more flexible to produce technology and innovation, which suitable to user needs. the analysis showed that R&D institutions should have a unit manager to manage technology and innovation are produced. There are 7 criteria that need to be considered in determining legal entity of a unit manager: ownership of R&D, networking, human resources capability, products and types of services, financial independence, organizational management and management flexibility. Based on these criteria most suitable legal entity of R&D product management institutions is BLU.
