Abstrak

[ABSTRAK

Tesis ini membahas share Indonesia yang rendah dalam perdagangan karbon internasional di pasar Protokol Kyoto dengan mekanisme pembangunan bersih / Clean Development Mechanism (CDM). Faktor internal Indonesia yaitu potensi sektor energi dan kehutanan, kepentingan serta kebijakan, dan faktor eksternal yaitu kepentingan negara Annex I dan responnya mempengaruhi posisi Indonesia dalam share perdagangan karbon internasional di pasar Protokol Kyoto tersebut. Hasil Penelitian menyarankan bahwa pertama konsistensi dan komitmen bersama para pihak baik negara-negara Annex I maupun negara-negara non-Annex I dalam menghadapi perubahan iklim, kedua diperlukan kapasitas yang memadai baik pemerintah, pengembang, konsultan, institusi yang berwenang, perbankan dan asuransi, ahli hukum dan LSM untuk suksesnya proyek CDM. Tanpa kesiapan yang memadai maka kebijakan yang dibuat akan berdampak pada kurang maksimalnya hasil yang diperoleh sesuai dengan kepentingan politik dan ekonomi nasional Indonesia pada tataran global.

ABSTRACT

This thesis discusses about the low share of Indonesia in international carbon trading at Protokol Kyoto Market with clean development mechanism (CDM). This condition is influenced by internal and external factors. The internal factors in Indonesia are potential of energy and forestry sector, Indonesia interests and policies, while the external factors are the interest of Annex I countries and its response that affect the share position of Indonesia in international carbon trading at Protokol Kyoto market. The first result of this study suggest that there must a consistency and commitment both from Annex I countries and non-Annex I countries to face of the climate change. The second is sufficient capacity was needed both from government, developers, consultants, institutional authorities, banking and insurance, legal experts and LSM to the success of this CDM project. Improper preparation would made the policy that has been made will make no significant result as the Indonesian national economical and political interest at the global level.;This thesis discusses about the low share of Indonesia in international carbon trading at

Protokol Kyoto Market with clean development mechanism (CDM). This condition is influenced by internal and external factors.
