Abstrak

ABSTRAK

Penelitian ini menjelaskan bagaimana survival analisis menggunakan regresi Cox Proportional Hazard dapat dipakai untuk menganalisis sebaran time to default debitur kredit mikro Bank XYZ berdasarkan karakteristik demografis debitur dan karakteristik produk. Terhadap sebaran tersebut menggunakan metode analisis non-parametrik khususnya point estimation dapat diestimasi karakteristik debitur yang mempunyai waktu survive terbaik yakni debitur di wilayah Kabupaten Indramayu, jenis kelamin wanita, pendidikan akhir SD, bidang usaha perdagangan besar dan eceran, status pernikahan janda/duda serta penghasilan.
