

Judul:

Peningkatan kadar dan rasio pasir kromit kadar rendah melalui proses benefisiasi dengan variabel jumlah reduktor batubara dan aditif caso4 pada reduction roasting = The enhancement of chromium grade and its ratio from local low grade chromite sand through beneficiation process with the variation of reductant and caso4 as additive dosage on reduction roasting process

Pengarang/Penulis:

Laurensia, author

Subjek:

Ferrochrome; Chromite; Magnetic Separation; Roasting (metallurgy)

Nomor Panggil:

S66515

Penerbitan:
